

MARVEL DEVELOPS

Brand Guidelines

Our Logo

The Marvel Develops mark combines an ascending bar-chart 'M' with a checkmark accent — representing growth and completed, trustworthy work. Use the versions below depending on background.

Mark — Transparent

Mark — Dark background

Mark — Light background

Full Lockup — for use on light backgrounds

Full Lockup — for use on dark backgrounds

Clear Space & Don'ts

Always keep clear space around the mark equal to the height of one bar. Don't stretch, recolor, rotate, add drop shadows/bevels, or place the mark on busy photo backgrounds without a solid overlay panel behind it.

Color Palette

Royal Blue #2563EB	Primary brand color — buttons, links, key accents
Purple #7C3AED	Secondary — gradients paired with Royal Blue
Gold / Amber #F59E0B	Accent — highlights, CTAs, the checkmark mark
Navy Deep #0A0F1E	Dark backgrounds, footer, dark-mode surfaces

Gradient: Royal Blue Purple is the signature gradient, used on the 'MARVEL' wordmark and hero headings. Gold is used sparingly as a single accent — never as a dominant fill.

Typography

To stay consistent with the live Marvel Develops website, keep using the same two-font system across every brand asset — flyers, the Academy page, and this guide's own layout follows it.

Clash Display

Headings, page numbers, hero titles. Bold, geometric, confident.

Inter

Body copy, forms, buttons, FAQ text. Clean and highly legible at small sizes.

Note: this PDF is typeset in Poppins as a close stand-in (Clash Display isn't installed in this generation environment) — the actual website and flyer should keep using Clash Display and Inter as already implemented in `app/globals.css`.

Voice & Tone

Professional, warm, concise, and jargon-free. Explain things in plain language — like talking to a friend, not a developer. Avoid technical jargon in customer-facing copy unless the audience is clearly technical.

For the Academy specifically: speak to outcomes ("build and deploy a real app") over features ("learn Node.js"). Parents and beginners respond to what they'll be able to do, not the tools used to do it.
